Ms. Danielle Mattox
Sr. Quality Engineer
Micross Components
1810 South Orange Blossom Trail
Apopka, FL 32703

Dear Ms. Mattox:

Re: Certification, Hybrid Microcircuits MIL-PRF-38534, FSC 5962, VQC-26-040626, CN096599

Your hybrid facility at the above address was sample audited the week of September 8th, 2025 for compliance with MIL-PRF-38534 Classes H and K, Technology Review Board (TRB) option. An acceptable level of confidence has been established that compliance with these requirements exists. Therefore, Micross Components' Class H certification is continued, and Class K certification is granted effective September 21, 2026.

This certification is for the following:

a. Quality Management Plan: MCO-Q-102 revision 14
b. Conversion of Customer Requirements: S-036 revision 10
c. Controlled documentation baseline for processing MIL-PRF-38534 devices: MCO-Q-102 revision 14
d. Technology Review Board: Q-020 revision 5

This certification is valid until terminated by written notification from the qualifying activity. The normal period of certification is two years from the date of the audit and, if warranted, may be withdrawn by DLA Weapon Support-VQC at any time. Your facility may be re-audited on a drop-in basis at any time.

All screening, qualification, conformance, and periodic inspection must be performed at a facility which has a DLA Weapon Support-VQ letter of Laboratory Suitability for the applicable test method and condition. QML manufacturers shall notify the qualifying activity immediately after learning of a potential issuance of a GIDEP alert, problem advisory or major quality'/reliability problem affecting QML products. This includes failure to perform screening or sample testing (including inspection) in accordance with MIL-PRF-38534. Failure to provide notification may be grounds for removal from QML-38534.

At minimum, it is required that DLA Weapons Support shall be notified of the following activities:

Federal Recycling Program Printed on Recycled Paper

Changes to the approved/certified manufacturing facilities name, locations, technologies, process flows, or testing subcontractors.

1. Immediately after learning of a failure, including:
   a. potential issuance of a GIDEP alert
   b. problem advisory or major quality/reliability problem affecting their QML product. This includes failure to perform screening or sample testing (including inspection) in accordance with MIL-PRF-38534.
   c. Whenever any quality, performance, or reliability issues are suspected or confirmed to affect shipped product.
   d. Any failures of a QML product or process/material regardless of where the failure occurred (in-line, customer return, etc.) and regardless of the quality level of the part (H, K, commercial, etc) on which the failure occurred.
2. Test optimization, including:
   a. Implementation – TABLE II of MIL-PRF-38534
   b. Changing, suspending or canceling a prior test optimization.
3. Class I and Class II changes for Class K per A.3.5 of MIL-PRF-38534.
4. Change of company QML contact, TRB Chairperson or other key QML personnel

If you have any questions concerning this letter, please contact Ms. Jaquish at (614)693-2738.

Sincerely,

GRANCHI.PAUL.J.1268086567
